

## Notice to our Partners:

We are happy to inform you of the continuation of the Ariterm business under the same brand and team.

Ariterm Service Oy (established 2012) has in October 2019 acquired the product rights and manufacturing resources for all Ariterm and Säättötuli products at and above 200kW.

More than 20 members of the original Ariterm team have joined the new organization built around the pre-existing service and spare parts company of the now defunct Ariterm Group. Operations continue in the same familiar facilities in Saarijärvi with the same spirit and even more drive.

Sales, production and spare parts deliveries continue for the foreseeable future with the clear objective of meeting and exceeding the old Ariterm business performance and customer satisfaction. The existing products and services will continue to be improved and we have new things on the way.

*Production continues: Ariterm Ventus (delivered in September) and Biojet Multi (delivered in October) being assembled at the Ariterm Service Oy facilities in Saarijärvi.*

Financing is secure, the first months of the new operations have been already been profitable with positive cashflow and excellent future outlook.

Confidence in our products, trust in our partners and the strong determination to meet the gap in the market left by Ariterm group drives us forward.

Be part of the future with us!

Best Regards,

Ariterm Service Oy team

Saarijärvi, Finland
